FAQ

Q1: What is the difference between IT planning and IT strategy?

Cases On Information Technology Planning Design And Implementation

A1: While closely related, IT planning is a more tactical process focused on the specific steps and actions needed to implement an IT strategy. IT strategy, on the other hand, is a high-level, long-term plan that aligns IT investments with overall business objectives. The strategy sets the direction, while the planning outlines the path to get there.

Q2: How do I choose the right IT project management methodology?

A2: The choice between methodologies like Waterfall and Agile depends on project characteristics. Waterfall is suitable for projects with well-defined requirements and minimal anticipated changes. Agile is better suited for projects with evolving requirements and a need for flexibility. Consider the project's complexity, timeline, and risk tolerance when making your decision.
