The heat energy transfers through the metal via conduction. The solution manual provides detailed solutions for problems involving Fourier's Law of Conduction, a key equation in this area.
- **Convection:** Heat transfer via the movement of fluids (liquids or gases). Examples include boiling water, where heat transfer from the pot to the water occurs through convection currents, and air circulating around a heating element. The manual offers ample examples and solved problems related to natural and forced convection, including concepts like Nusselt number and boundary layers.
- **Radiation:** Heat transfer through electromagnetic waves. The sun warming the earth is the quintessential example of radiative heat transfer. This section of the **Introduction to Heat Transfer Wiley Solution Manual** will often cover

the Stefan-Boltzmann Law and view factors, essential for tackling problems involving thermal radiation.
