Forget expensive gym memberships! Calisthenics, using your body weight as resistance, is a highly effective and completely free way to build muscle and improve strength. Start with fundamental exercises like:

- **Push-ups:** Vary hand placement to target different muscle groups (wider grip for chest, closer grip for triceps).
- **Pull-ups:** Use a sturdy bar at a park or playground if you don't have one at home. Start with negative pull-ups (slowly lowering yourself from a supported position) if needed.
- **Squats:** A fundamental exercise for leg strength and development. Progress to variations like jump squats for added intensity.
- **Lunges:** Excellent for building leg strength and balance.
- **Plank:** Develop core strength and stability.

Progressive Overload: The key to continuous improvement in calisthenics is progressive overload. This means gradually increasing the difficulty of your workouts over time. You can do this by:

- **Increasing repetitions:** Perform more reps of each exercise.

- **Increasing sets:** Add more sets of each exercise.

By consistently employing progressive overload, you'll continue to challenge your muscles and stimulate growth even without weights.
